

Manufacturing Laboratory Technician

Do you have a background in Biochemistry or Molecular Biology and are you looking to join a small growing company? If yes, we have an opportunity to join our production team at Chesterford Research Park.

We are looking for a Manufacturing technician. In this role you will be responsible for the routine manufacturing and ongoing laboratory project work developing and optimising in vitro diagnostic assays using isothermal amplification.

The role will include preparing buffers and solutions, protein expression and protein purification, preparing lyophilisation formulations and manufacturing lyophilised beads. You will perform thermogravimetric analysis and manufacture lateral flow test strips. You will do this at the same time as contributing to the effective running of the laboratory including equipment maintenance and performing stock checks.

Someone with a Biochemistry or Molecular Biology background and some laboratory experience through vocation or study will be the ideal candidate. You will perform the role within our Quality Management System so familiarity with this kind of environment is beneficial though not essential.

Please send applications consisting of a CV and a covering letter to careers@biocrucible.co.uk quoting reference number MT1022C.

We offer a competitive salary in our growing but small and friendly environment.
